

DID YOU KNOW?

- Propane is the 3rd most popular auto fuel in America, behind gasoline and diesel
- 60% of propane comes from natural gas wells and the rest is a byproduct of crude oil refining
- More than 90% of all propane used in the U.S. is produced domestically
- Propane autogas can reduce your fleet's operating costs by 30%
- An engine converted to LPG consumes ≈ 10% more fuel compared to gasoline MPG with little or no loss in horsepower
- A typical 25 gal. tank holds ≈ 180 lbs. of liquid propane – which gives a comparable driving range as an equivalent tank of gasoline
- Propane is NOT a greenhouse gas. LPG can cut smog producing exhaust by as much as 70%
